Solar power storage price

Overview

Installing home battery storage typically costs between \$6,000 and \$18,000, according to live pricing from solar.com's installation network. Why such a wide range?

The biggest factor is size, measured by how many kilowatt-hours (kWh) of electricity the battery can store.

Installing home battery storage typically costs between \$6,000 and \$18,000, according to live pricing from solar.com's installation network. Why such a wide range?

The biggest factor is size, measured by how many kilowatt-hours (kWh) of electricity the battery can store.

If you're looking to buy battery storage for your solar panels, you can probably expect to pay between \$7,000 and \$18,000. Just know that the overall price range for a solar battery is even wider, with prices anywhere from a few hundred dollars to \$30,000+, depending on what you buy, who you buy it.

A single battery costs \$10,000-\$19,000 to install, but your price might change based on the battery type and size. But how much does home battery storage cost?

In this article, we'll explore solar battery prices and six factors that influence the cost of installing a battery. Did you know?

The “One Big Beautiful Bill” signed into law on July 4 terminates the homeowner-claimed 30% tax credit for residential.

The average cost to install a solar battery in 2025 ranges from \$9,000 to \$19,000, with most homeowners spending about \$13,000. The total price depends mainly on the type and capacity of the battery, as well as the complexity of your system. Professional installation typically adds another \$1,000.

Understanding Battery Types: Solar storage batteries primarily include lithium-ion and lead-acid types, with lithium-ion offering better efficiency and longevity but at higher costs (\$5,000 to \$15,000), while lead-acid options are more budget-friendly (\$150 to \$1,500) but have a shorter lifespan.
