Solar string inverter

Overview

String inverters connect multiple solar panels in a series. Power is routed to a single inverter, where it's converted to AC, then distributed to your main electrical panel and out to your home. What are 'string' solar inverters?

This review focuses on common 'string' solar inverters, the most popular type. These inverters use one or more strings (groups) of solar panels connected in series. String solar inverters are the most common type used in the UK, Europe, Australia, and Asia. They are also growing in popularity in the US, where microinverters are extremely popular.

What is a string inverter system?

A string inverter system aggregates the power output of groups of solar panels in your system into "strings." Multiple strings of panels then connect to a single inverter where electricity is converted from DC to AC electricity.

Who makes the best solar string inverter?

We review the best grid-connect solar inverters from the world's leading manufacturers Fronius, SMA, SolarEdge, Fimer, Sungrow, Huawei, Goodwe, Solis and many more to decide who offers the highest quality and most reliable solar string inverters for residential and commercial solar.

How does a solar string inverter work?

The functioning of a solar string inverter relies on monitoring the voltage and current from the solar panel string. It adjusts the operation point to extract the maximum possible power, using algorithms like Maximum Power Point Tracking (MPPT). The converted AC power is then sent to the main electrical panel for distribution.

Can a string inverter be used with a battery?

These inverters are often used with batteries to store power for later use. Solar inverters are generally efficient, especially when fitted with MPPT.

However, for the efficiency to be realized when using a string inverter, solar panels in each string must receive sunlight, or the string or output will be reduced.

Are string inverters good for solar panels?

String inverters are an effective, affordable solution for many solar installations. The solar panel systems that are best suited for string inverters have little to no shading and panels that are on fewer than three separate roof planes.
