South Sudan home energy storage

12.8V 200Ah

Overview

A public-private partnership in South Sudan has launched the country's first major solar power plant and Battery Energy Storage System (BESS) in the capital Juba, where it is expected to provide electricity to thousands of homes. Does South Sudan have a solar-plus-battery storage project?

Key Figures & Findings: South Sudan is embarking on a significant renewable energy transformation, with a new solar-plus-battery storage (BESS) project to address the country's alarmingly low energy access.

What is a solar power plant in South Sudan?

How does South Sudan produce energy?

Most of the country's current energy production comes from generators that burn imported diesel, a costly method both economically and environmentally. According to the World Bank, only 8.4% of the population had reliable access to power and electricity in 2022, leaving the door wide open to produce much-needed renewable energy in South Sudan.

Why is South Sudan struggling to provide electricity to its citizens?

According to a 2024 sciencedirect.com report, South Sudan struggles to provide its citizens access to electricity despite having abundant energy resources, particularly fossil fuels.

Can solar power improve South Sudan's Energy Infrastructure?

Future Implications: Integrating solar and storage solutions could stabilize South Sudan's energy infrastructure, creating a model for renewable energy

adoption in other energy-deprived regions. South Sudan launches solar-BESS project to expand grid access, replacing diesel generators and boosting energy for underserved regions.

Can South Sudan electrify?

South Sudan is at a crossroads in terms of its ability to electrify the nation. Looking forward, the path toward clean, renewable energy is both cost-effective and environmentally conscious, resulting in increased energy security, sustainability and community resilience.
