Spanish rooftop solar energy storage

Overview

Around one-quarter of all new rooftop PV systems installed in Spain in 2024 included battery storage, underscoring continual growth in distributed energy, despite a decline in total installed storage capacity.

Around one-quarter of all new rooftop PV systems installed in Spain in 2024 included battery storage, underscoring continual growth in distributed energy, despite a decline in total installed storage capacity. From pv magazine Spain The deployment of batteries for rooftop PV systems under Spain's.

While total battery capacity installed alongside rooftop solar fell by 34% in 2024 to 327 MWh, a different trend is quietly reshaping the country's energy landscape: 26% of newly connected rooftop PV systems now come with battery storage. This figure — representing 110 MWh of capacity — may not.

The figure underscores continual growth in distributed energy despite a decline in total installed storage capacity. The deployment of batteries for rooftop PV systems under Spain's self-consumption regime declined 34%, year on year, in 2024, with 327 MWh installed, according to data from the.

That's despite the fact that they, along with their neighbors, own a source of electricity: 200 rooftop solar panels installed at the end of 2023. The panels didn't help them ride out the blackout because they are connected directly to the grid. Each co-owner, including Casas and Morate and their.

The Spanish government has taken significant steps to promote self-consumption of solar energy, including the approval of a road map with over thirty measures aimed at facilitating its deployment and eliminating barriers. However, targets for installed capacity were initially deemed insufficient.
