MONITORING OF SYSTEM STATUS

## Overview

---

On March 29 this year, the head of the Committee for Architecture and Construction, Nizom Mirzozoda, issued a new order, under which, starting on April 1, 2024, all new and renovated buildings must be equipped with solar energy systems capable of storing at least one day's worth of electricity, in addition to being connected to the central power grid. Does Tajikistan have a solar power plant?

The project also includes a hybrid energy storage power plant rated for 180-kilowatt hours. The new solar plant is a direct result of successful cooperation between the Government of Tajikistan, USAID, and Pamir Energy Company.

Can Tajikistan become a net energy exporter?

The Government of Tajikistan aims to transform itself from a net energy importer to a net energy exporter, on the strength of its potential for hydropower and solar power production. According to the World Bank, Tajikistan's power production is 92 percent hydropower, six percent hydrocarbon, and two percent from other sources.

Does Tajikistan have a power system?

The existing electrical transmission and distribution systems of Tajikistan, designed in the 1970s during the Soviet era, are also being upgraded and expanded, allowing transmission of power from Tajikistan to surrounding countries.

What is the solar energy potential of Tajikistan?

The climate of Tajikistan is very favorable for the use of solar energy, with an average of 280-330 sunny days per year. The total solar radiation intensity varies during the year between 280 and 925 MJ/m<sup>2</sup> in the foothills, and between 360 and 1120 MJ/m<sup>2</sup> in the highlands. Tajikistan does not have specified solar energy reserves mentioned in the provided text. The text only mentions their coal reserves.

What is Tajikistan's hydropower potential?

Tajikistan's hydropower potential is estimated at 527 billion kWh per year, which exceeds the existing electricity consumption of the countries of Central Asia by 300%. The country's largest project is the Roghun Dam Hydropower Plant project, which when completed is estimated to produce 3600 Megawatts of energy.

What is the main source of energy in Tajikistan?

Based on close co-ordination with the Academy of Sciences and its public research institutions, relevant ministries, national enterprises, SMEs, international financial institutions (IFIs), and other bilateral or multilateral donors in the energy sector. Hydropower is the main source of energy in Tajikistan, followed by imported oil, gas and coal.
