

## SolarTech Power Solutions

# Telecom site annual inspection battery cabinet

## Overview

---

This article delves into the core aspects of telecom battery rack inspection, including testing items, testing instruments, testing methods, and established testing standards that collectively ensure the longevity, safety, and performance of telecom power systems. What is a battery inspection checklist?

This detailed Battery Inspection Checklist ensures battery performance and safety. This checklist, which includes both visual and technical inspections, assists in identifying difficulties with mounting, cables, electrolyte levels, & voltage to ensure proper battery function.

What are the IEEE Standards for battery maintenance & testing?

The IEEE Standards provide recommended practices and schedule for maintenance and testing, as well as guidance for determining when batteries should be replaced.

What is a battery inspection?

The first level of inspection involves a thorough visual examination of the battery's physical condition. This step checks for any mechanical or structural faults that could hinder performance. Mark "OK," "Not OK," or "N/A" in the appropriate boxes for each point.

How often should a battery be inspected?

Measure the electrolyte temperature of 10% or more of the battery cells. At least once per year, the quarterly inspection will be augmented as follows: In the case of a lead-antimony battery, measure and record specific gravity and electrolyte temperature of all cells.

What is a battery capacity test?

A battery capacity test will consist of a controlled current discharge of the battery systems in order to determine the capacity at the rate determined by the load reserve time requirements or at the manufacturer's claimed

performance rate for a specified time.

How often should a cell/unit be inspected?

Measure and record the temperature of the negative terminal of each cell/unit. At least once per year, the quarterly inspection will be augmented as follows: Measure and record cell to cell and terminal connection resistance.
