The cost per kilowatt-hour of lithium battery energy storage

Overview

How much does a lithium ion battery cost per kWh?

1 All prices do not include sales tax. The account requires an annual contract and will renew after one year to the regular list price. The cost of lithium-ion batteries per kWh decreased by 20 percent between 2023 and 2024. Lithium-ion battery price was about 115 U.S. dollars per kWh in 202.

How much does a battery storage system cost?

Around the beginning of this year, BloombergNEF (BNEF) released its annual Battery Storage System Cost Survey, which found that global average turnkey energy storage system prices had fallen 40% from 2023 numbers to US\$165/kWh in 2024.

How much does lithium ion battery storage cost?

r (kWh) of lithium-ion battery storage was around \$1,200. Today, thanks to a huge push to develop cheaper and more powerful lithium-ion batteries for use in electric vehicles (EVs), that cost has dropped to between \$150 and \$200 per kWh, and by 2025 it had been predicted to fall to under \$100/kWh. The future.

How much does a lithium ion battery cost in 2024?

The global average price of lithium-ion battery packs has fallen by 20% year-on-year to USD 115 (EUR 109) per kWh in 2024, marking the steepest decline since 2017, according to BloombergNEF's annual battery price survey, unveiled on Tuesday. Energy storage battery. Photo by Anna Vasileva.

What are battery cost projections for 4-hour lithium-ion systems?

Battery cost projections for 4-hour lithium-ion systems, with values relative to 2024. The high, mid, and low cost projections developed in this work are shown as bold lines. Published projections are shown as gray lines. Figure values are included in the Appendix.

Why are lithium-ion batteries so expensive in 2025?

In 2025, lithium-ion battery pack prices averaged \$152/kWh, reflecting ongoing challenges, including rising raw material costs and geopolitical tensions, particularly due to Russia's war in Ukraine. These factors have led to high prices for essential metals like lithium and nickel, impacting the production of energy storage technologies.
