

## SolarTech Power Solutions

# The first solar power generator for home use

## Overview

---

What is a residential solar generator?

Unlike commercial solar generators, residential solar generators are often more compact and portable and intended to power households. They are perfect for those who live in remote places without access to reliable energy or who require a backup power source in case of a power outage.

What is a commercial solar generator?

Commercial solar generators are intended to supply power to businesses, organizations, and communities. They are bigger and more powerful than home solar generators. They are perfect for people who want to produce power for businesses or those who need a bigger power source for their homes.

Should you buy a solar generator or a gas generator?

Gas generators still have a place in extreme backup scenarios, but for most households, solar covers the essentials without the fumes or fuss. And if you do need something with more output, especially for larger homes, it's worth looking into the whole house generators that offer robust power and automatic operation.

Can a solar generator be used as a power station?

A solar generator can supply energy anywhere, from any appliance, from fridges to laptops to fans. You can use solar generators as portable power stations during camping or source of home backup power during blackouts. There are several ways to deploy portable generators.

Do you need a solar generator for home backup?

With climate disasters on the rise, the need for a solar generator for home backup is more acute than ever. But, for most of us, this is new territory and it can be difficult to unpack what your power needs are and how much budget

you need to build an effective emergency setup.

Can a solar generator power a whole house?

It depends on your power needs. For basic essentials like a fridge, lights, and Wi-Fi, a 1000W–2000W generator may be enough. For whole-home backup, look for 3000W–5000W models with expandable battery capacity.
