

## SolarTech Power Solutions

# The price of energy storage cabinet batteries has dropped

## Overview

---

The quoted battery prices have dropped to \$1,133 per kilowatt-hour of energy storage capacity -- a 16% drop from last year.

The quoted battery prices have dropped to \$1,133 per kilowatt-hour of energy storage capacity -- a 16% drop from last year.

The average cost consumers are paying for home batteries has fallen to a record low, according to a new report. Home batteries like the Tesla Powerwall 3 are gaining popularity as their prices drop and consumers see how they can help them save on energy bills. Home batteries have never been cheap.

Around the beginning of this year, BloombergNEF (BNEF) released its annual Battery Storage System Cost Survey, which found that global average turnkey energy storage system prices had fallen 40% from 2023 numbers to US\$165/kWh in 2024. This was the biggest drop since BNEF began its surveys in 2017.

Let's cut to the chase: whether you're a solar enthusiast, an EV driver, or just someone tired of sky-high electricity bills, the energy storage battery cost decline trend chart is your new best friend. This isn't just for engineers in lab coats—it affects how we power our homes, cars, and even.

The cost of battery storage systems has been declining significantly over the past decade. By the beginning of 2023 the price of lithium-ion batteries, which are widely used in energy storage, had fallen by about 89% since 2010. Are battery technologies reducing energy costs?

The improvements we've.

The belief that battery storage systems are prohibitively expensive, making them impractical for widespread use in residential and commercial settings, is outdated. While these systems were once costly, the price of batteries has significantly decreased over the past decade, making energy storage. How much does a battery storage system cost?

Around the beginning of this year, BloombergNEF (BNEF) released its annual Battery Storage System Cost Survey, which found that global average turnkey energy storage system prices had fallen 40% from 2023 numbers to US\$165/kWh in 2024.

Does battery storage cost reduce over time?

The projections are developed from an analysis of recent publications that include utility-scale storage costs. The suite of publications demonstrates wide variation in projected cost reductions for battery storage over time.

Are battery storage costs based on long-term planning models?

Battery storage costs have evolved rapidly over the past several years, necessitating an update to storage cost projections used in long-term planning models and other activities. This work documents the development of these projections, which are based on recent publications of storage costs.

Why are battery prices dropping?

The quoted battery prices have dropped to \$1,133 per kilowatt-hour of energy storage capacity -- a 16% drop from last year. Lower battery costs are a result of streamlined manufacturing processes, especially in China, and the decreasing cost of materials. 70% of the world's lithium-ion cell production happens in China, according to IDTechEX.

Why are solar and battery storage prices falling?

The study focuses on solar and battery storage, but the researchers note that wind power, heat pumps, and other clean technologies are also seeing a sharp drop in prices, too. Technological advances are making solar and battery storage smarter and more efficient.

What happened to battery prices in 2024?

New York, December 10, 2024 – Battery prices saw their biggest annual drop since 2017. Lithium-ion battery pack prices dropped 20% from 2023 to a record low of \$115 per kilowatt-hour, according to analysis by research provider BloombergNEF (BNEF).
