The prospects of solar panels for solar power generation

Overview

In our January Short-Term Energy Outlook (STEO), which contains new forecast data through December 2025, we forecast new capacity will boost the solar share of total generation to 5.6% in 2024 and 7.0% in 2025, up from 4.0% in 2023.

In our January Short-Term Energy Outlook (STEO), which contains new forecast data through December 2025, we forecast new capacity will boost the solar share of total generation to 5.6% in 2024 and 7.0% in 2025, up from 4.0% in 2023.

The year 2024 was a true landmark year for solar power. Global solar installations reached nearly 600 GW – an impressive 33% increase over the previous year – setting yet another record. Solar accounted for 81% of all new renewable energy capacity added worldwide. While remaining a modest.

The future of solar energy is set for exceptional growth as advancements in technology, increased investments, and strong policy support continue to push the industry forward. In recent years, solar power has proven to be a key solution for reducing dependence on fossil fuels and mitigating climate.

We expect solar electric generation will be the leading source of growth in the U.S. electric power sector. In our January Short-Term Energy Outlook (STEO), which contains new forecast data through December 2025, we forecast new capacity will boost the solar share of total generation to 5.6% in.

The Solar Futures Study explores pathways for solar energy to drive deep decarbonization of the U.S. electric grid and considers how further electrification could decarbonize the broader energy system. The study was produced by the U.S. Department of Energy (DOE) Solar Energy Technologies Office.

The US solar industry installed 7.5 gigawatts direct current (GW dc) of capacity in Q2 2025, a 24% decline from Q2 2024 and a 28% decrease since Q1 2025. Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW.

According to the latest Short-Term Energy Outlook from the U.S. Energy Information Administration (EIA), solar power generation in the U.S. is projected to skyrocket by 75% from 163 billion kilowatt-hours (kWh) in 2023 to an impressive 286 billion kWh by 2025. This explosive growth is driven by.
