

SolarTech Power Solutions

Türkiye solar power supply system

Overview

Türkiye's solar power capacity reached over 19 GW in just two and a half years, exceeding its 2025 target by August 2024 and supplying 6% of the country's total electricity, the report said. How do solar power projects work in Turkey?

The establishment and operation of solar power projects are influenced strongly by energy regulations and policies. In Turkey, solar power projects can be easily installed in compliance with legislation and laws dealing with renewable energy, grid integration, and energy purchase agreements.

Does Turkey have solar power?

Turkey has tremendous solar energy potential due to its geographical positioning to meet a large part of its electricity needs from renewable energy sources to minimize the negative impacts of fossil fuels. Over the past ten years, the share of solar power in the total installed capacity has risen steadily.

Why is the solar energy industry growing in Turkey?

In Turkey, the solar energy industry can become more competitive as a result of technological advancements, such as improvements in solar PV energy efficiency, grid integration, and the development of new energy storage methods. Moreover, the growth of the solar energy sector can be influenced by the ability and capacity of the electricity grid.

Does Turkey have a solar PV potential?

Solar photovoltaic (PV) energy accounted for 4.7% of the electricity generation and the installed capacity was 9.425 GW with 9353 solar power plants of various types. This paper provides an overview of the current state of solar PV potential in Turkey, evaluates its capacity to meet the country's energy demand, and discusses its future prospects.

Is solar power a good investment in Turkey?

In Turkey, as the installed PV capacity continues to grow during the previous five years, the value of solar power generation has increased. In terms of installations, solar PV energy is relatively new compared to other renewable resources in Turkey.

Can solar power reduce Turkish natural gas imports?

Turkish natural gas imports can be significantly reduced by using solar energy potential. About 100 million USD worth of natural gas imports are equivalent to each 1 MW installed solar power plant. The amount of solar energy capacity installed in Turkey now accounts almost for one percent of the global capacity of 1.18 TW.
