

SolarTech Power Solutions

UK solar panel double glass manufacturer

Overview

What are the different types of solar panels?

With numerous options available on the market, it can be challenging to determine the best choice between single glass, double glass (also known as mono glass), and bifacial solar panels. This guide breaks down the real differences, so you can make the best decision for your property and your budget in 2025.

What is a GB-Sol Infinity Solar Roof?

The Infinity solar roof is an almost seamless glass and aluminium roof covering from ridge to gutter and side to side, with huge solar power output and a 25 year warranty. GB-Sol's roof integrated solar PV system enables full-sized, high efficiency solar panels to be discreetly fitted within any type of conventional roofing material.

Are Polysolar solar panels transparent?

Our transparent solar glass panels are available in various transparencies allowing light in whilst providing clean solar energy. Take a look through our completed projects for inspiration or a better understanding of things we are capable of. Polysolar Sponsors the Showcase Solar Exhibition in Soho!.

Why should you choose GB-Sol solar panels?

When you choose GB-Sol, you are choosing safety, reliability, durability and sustainability. GB-Sol awarded 'Best Buy' for manufacture of solar panels with a score of 80 where most solar panel manufacturers scored less than 40. Take a look at our new guide for PV Slate on Heritage Buildings.

Are all solar panels the same?

Not all solar panels are created equal. Cheaper quotes often use single glass panels, which may look appealing but could cost more in the long run due to reduced lifespan and performance. Always check the panel type, warranty,

and expected output, not just the price.

What are bifacial solar panels?

How they're built: Like double glass, but the solar cells can absorb light from both the front and the back. Best for: Homeowners who want to maximise their energy generation, especially in properties with flat, light-coloured roofs or open ground installations. Bifacial Panels With Cells on the back as well as the front maximise solar generation.
