

## SolarTech Power Solutions

# What is an air-cooled energy storage project

## Overview

---

What is liquid air energy storage?

Liquid air energy storage (LAES) is a technology that converts electricity into liquid air by cleaning, cooling, and compressing air until it reaches a liquid state. This stored liquid air can later be heated and re-expanded to drive turbines connected to generators, producing electricity.

What is compressed air energy storage (CAES)?

Compressed air energy storage (CAES) is an effective solution for balancing this mismatch and therefore is suitable for use in future electrical systems to achieve a high penetration of renewable energy generation.

What is cool thermal energy storage?

Cool Thermal Energy Storage is a new application of an old idea that can cut air conditioning energy costs in half while preparing your building for the future. Air conditioning of commercial buildings during summer daytime hours is the largest single contributor to electrical peak demand.

How is solar energy used in air storage caverns?

Solar energy is introduced to heat the high-pressure air from the air storage cavern to improve the turbine inlet air temperature. An ORC was introduced to recover the heat carried by the air-turbine exhaust.

What is energy storage & efficient air conditioner?

Recently named an R&D 100 Award winner, the Energy Storing and Efficient Air Conditioner is a new class of cooling technology—one that separates dehumidification from active cooling and integrates energy storage to reduce costs, support grid stability, and maintain indoor comfort with significantly less energy.

Can compressed air energy storage improve the profitability of existing power

plants?

New compressed air energy storage concept improves the profitability of existing simple cycle, combined cycle, wind energy, and landfill gas power plants. In: Proceedings of ASME Turbo Expo 2004: Power for Land, Sea, and Air; 2004 Jun 14–17; Vienna, Austria. ASME; 2004. p. 103–10. F. He, Y. Xu, X. Zhang, C. Liu, H. Chen
