# When will Saudi Arabia build a hydrogen energy station

## Overview

---

In July 2025, it was officially launched as a green hydrogen hub through a joint venture between ACWA Power and Germany's EnBW, targeting 4 GW of electrolysis and 400,000 tons of annual hydrogen output by 2030.

In July 2025, it was officially launched as a green hydrogen hub through a joint venture between ACWA Power and Germany's EnBW, targeting 4 GW of electrolysis and 400,000 tons of annual hydrogen output by 2030.

Saudi Arabia is rapidly scaling its green hydrogen infrastructure, with 48 gigawatt-hours (GWh) of battery energy storage systems (BESS) planned by 2030. These systems will store solar energy harvested during the day and release it at night, enabling round-the-clock hydrogen production. This.

Saudi Arabia is ramping up its green hydrogen ambitions with a massive new facility planned in Yanbu. The Yanbu Green Hydrogen Hub, developed by ACWA Power in partnership with Germany's EnBW, is expected to be nearly twice the size of the ongoing 2.2 gigawatt Neom project. This new site will.

Saudi Arabia's massive green hydrogen facility at its futuristic city, NEOM, has reached a crucial milestone. The Kingdom of Saudi Arabia is fast-tracking the progress at the world's most futuristic city, as it has now passed the 80% completion mark. The site will be powered by a massive green.

BAKU: The world's largest green hydrogen plant, which is under construction in Saudi Arabia, is on-track to begin production in December 2026, the company's CEO told Arab News. NEOM Green Hydrogen Company is now 60 percent complete, according to CEO Wesam Al-Ghamdi. Al-Ghamdi emphasized the.

Saudi Arabia has announced plans for a major green hydrogen facility in Yanbu, which is set to become one of the world's largest. Spearheaded by ACWA Power in collaboration with Germany's EnBW, the project will produce 4 lakh tonnes of green hydrogen annually, to be converted into green ammonia for.

Yanbu, a bustling industrial city on Saudi Arabia's Red Sea coast, is making bold moves—but not in oil this time. It's gearing up to become home to what could be the world's biggest facility for green hydrogen production and green ammonia export. Yes, you read that right—Saudi Arabia is putting.
