

## SolarTech Power Solutions

# Wind power energy storage container integrated system

## Overview

---

Our containerized offshore wind energy storage solution is purpose-built to enhance the efficiency and stability of offshore wind power systems by addressing challenges such as fluctuating energy production and grid balancing. How can wind energy be used as a storage system?

Since wind conditions are not constant, it is crucial to develop hybrid power plants that combine wind energy with storage systems. These technologies allow wind turbines to be directly coupled with energy storage systems, efficiently storing excess wind power for later use.

What is a wind storage system?

A storage system, such as a Li-ion battery, can help maintain balance of variable wind power output within system constraints, delivering firm power that is easy to integrate with other generators or the grid. The size and use of storage depend on the intended application and the configuration of the wind devices.

Can energy storage systems improve wind power integration?

Overall, the deployment of energy storage systems represents a promising solution to enhance wind power integration in modern power systems and drive the transition towards a more sustainable and resilient energy landscape. 4. Regulations and incentives.

How can large wind integration support a stable and cost-effective transformation?

To sustain a stable and cost-effective transformation, large wind integration needs advanced control and energy storage technology. In recent years, hybrid energy sources with components including wind, solar, and energy storage systems have gained popularity.

What is integrated storage in a wind turbine?

This type of storage is known as an integrated storage in the DC link of the wind turbine. A recent master's degree thesis at the Norwegian University of Science and Technology evaluated the modular multilevel converter for medium-voltage integration of a battery in the DC link (Rekdal 2018).

Should wind power plants have integrated storage?

To expand on the grid support capabilities of wind-storage hybrids, GE conducted a study on wind power plants with integrated storage on each turbine rather than central storage, along with an extra inverter and transformer for redundancy (Miller 2014). There are always some trade-offs involved in choosing a storage topology.
