

SolarTech Power Solutions

Yemen containerized power generation manufacturer

Overview

Is Yemen an energy exporter?

Yemen is net energy exporter. Primary energy use in Yemen was 87 TWh and 4 TWh/million people in 2008 and 88 TWh (4 TWh/M) in 2009. According to the World Bank, Yemen has the lowest level of electricity connection in the Middle East, with only 40% of the population having access to electricity. Rural areas are particularly badly affected.

Which genset containers are available?

All genset containers are also available with an option for -40°C and most variants can be upgraded for $+45^{\circ}\text{C}$. A broad range of options, both mechanical and electrical, are available to ensure that our containers meet the project requirements. For example, we offer several heat recovery configurations and exhaust after treatment systems.

What is the standard ventilation for genset containers?

The standard ventilation is designed for ambient temperatures from -25°C to $+40^{\circ}\text{C}$. The genset containers can be equipped with several additional features to enable operation at lower temperatures on request. Type 6 containers are available with a similarly broad range of options that we offer for the Type 2 / 3 / 4 containers.
